STARLABS

Star Lab Holdings & Star Lab Fund – Investor Business Plan

1. Executive Summary

Star Lab Holdings (SLH) and Star Lab Fund (SLF) together form the first Web3-enabled celebrity consumer brand conglomerate. SLH incubates and operates high-margin celebrity and influencer-backed consumer brands across beauty, personal care, wellness, and functional foods. SLF issues the $STAR token, enabling shared economic participation in Star Lab's portfolio performance.

Star Lab is launching four flagship brands and 41 SKUs across the US, Canada, and international markets, supported by distribution LOIs for more than 20,000 US retail doors. Manufacturing agreements, existing JV revenues, and a US$30M blockchain technology stack significantly de-risk execution.

We are seeking to raise US$25 million at a US$150 million pre-money valuation. Use of funds is solely for growth: fueling product launches, inventory manufacturing, marketing campaigns, and scaling into new markets – not for founder salaries or basic overhead. This capital will enable the launch and expansion of multiple celebrity-backed brands in 2026–2028, rapid customer acquisition, and the build-out of supply chain and distribution. The founding team's deep experience, financial commitment, and lean operation (minimal cash burn with strong margins) underscore our maturity and alignment with investors.

In summary, Star Lab offers a unique investment opportunity at the intersection of consumer brands and blockchain technology. Our primary revenue stream will come from high-growth product sales in the beauty and personal care market – a massive, growing sector – amplified by celebrity influence. The secondary value stream is the $STAR token, which will capture 7–10% of EBITDA and reward our community through profit-sharing, staking rewards, and governance rights. The $STAR token will be

STARLABS

launched only after core products gain traction, ensuring that token value is firmly tied to company performance and growth. This two-tier model (equity and token) provides investors multiple avenues for returns: equity upside from brand portfolio growth (we project over $1 billion in revenue by 2028 with strong EBITDA margins) and token upside from a share in profits and ecosystem expansion. With a diversified portfolio of brand deals, a fully built tech platform, and a seasoned team, Star Lab is positioned to deliver high returns with disciplined execution. The following plan details our business model, market opportunity, go-to-market strategy, tokenomics, team, financial projections (base case and upside case), risk analysis, and roadmap toward building a category-defining company valued well beyond $150M in the coming years.

2. Company Overview

2.1 Mission & Vision

Star Lab's mission is to become the premier launchpad for celebrity and influencer-backed consumer brands, leveraging proprietary blockchain technology to give consumers and investors skin in the game. We bridge the gap between traditional consumer product ventures and Web3, creating a new paradigm where brand ownership and loyalty are enhanced by tokenized assets and community participation.

2.2 Structure

Star Lab Holdings is the parent entity that owns the technology platform and equity stakes in each brand venture. Star Lab Fund is our associated investment vehicle (eventually to be tokenized via $STAR) that will hold and manage the community's share of economics (such as the 7–10% EBITDA allocation to token holders). Investors in this round are investing in the holding company at a $150M valuation, which in turn owns the portfolio of brand assets and the tech stack. This structure allows flexibility: the company can realize value through individual brand exits or a future IPO, while the $STAR token (to be launched later) enables broader participation and aligns consumer incentives with the platform's success.

STARLABS

2.3 Technology Platform

Since 2022, our affiliate Advantage Group has built a Layer-1 blockchain designed for real-world assets (RWA). This $30M tech stack (contributed to Star Lab) powers the "digital backbone" of each brand we launch. Every product SKU can be tokenized on-chain, enabling tracking of product provenance, innovative loyalty/rewards programs, and NFT integrations. Beyond technology, we have developed a "Shark Tank-style" launchpad application – a digital platform where new brand ideas are vetted, developed, and launched. The platform streamlines product development, supply chain management, and community engagement, allowing Star Lab to launch new brands faster and more efficiently than traditional incubators. The final platform will incorporate the Stacks blockchain allowing for BTC core and layer 2 interoperability.

Alongside this platform is a BTC treasury that will be managed by an audited 3rd party custody provider.

2.4 Team & Culture

Our leadership team comprises seasoned entrepreneurs and industry professionals with track records in tech startups, consumer brands, and venture investing. The founders have worked together since 2021 and self-funded all operations to date (zero founder salaries). We assembled a world-class development team of 68 full-time engineers (via Advantage Group) who built our blockchain and platform from scratch. We also have in-house product development experts (from the beauty/CPG industry) and a brand partnerships team for talent deals. All key personnel are equity holders with a long-term commitment, underscoring our investor-friendly culture – we prioritize growth and value creation over short-term gain.

STARLABS

3. Market Opportunity

3.1 Industry Landscape

The global beauty, personal care, and wellness market exceeds US$500 billion annually and is growing steadily. Consumers – especially Gen Z and millennials – increasingly trust creators and influencers over traditional corporations, driving the rise of influencer-led products. This industry has proven resilient through economic cycles and was called “one of the darlings of the consumer sector,” with strong growth even in downturns. Real-world examples underscore the opportunity: Kylie Jenner’s cosmetics line reached ~$420M in sales within 18 months of launch, leading Coty to acquire a majority stake at a $1.2B valuation[1]. Similar success stories (Rihanna’s Fenty Beauty, Emily Weiss’s Glossier, etc.) show that celebrity-founded brands can capture enormous market share quickly.

3.2 Competitive Landscape

While many celebrities have launched product lines, most creator-led brands remain short-lived or fail to share economic upside with fans. Star Lab differentiates by combining influencer branding with blockchain-based community ownership. Incumbent consumer goods companies are beginning to experiment with influencers, but none offer the tokenized loyalty and ownership model that is central to Star Lab. Our first-mover advantage in integrating Web3 economics with consumer brands gives us a defensible niche. Moreover, our portfolio approach (multiple brands) provides diversification that single-product competitors lack. In the men’s grooming segment, for example, the global market was $202.6B in 2022 and is projected to reach $376.4B by 2030 (8.0% CAGR)[2]. We believe a high-profile line like our NFL celebrity-backed brand can capture significant share by targeting this growing demand with authentic celebrity endorsement. Fundamentally, our competition is twofold: traditional big brands (which we counter with agility and built-in audiences) and emerging startups (which lack our platform scale, tech assets, and celebrity network). By securing top influencer

STARLABS

partners and building community lock-in via tokens, Star Lab is creating high barriers to entry.

4. Product & Brand Portfolio

4.1 Flagship Brands (Launching 2026–2027)

- **NIXT (Hair Removal)** – A patent-pending at-home hair removal and growth-inhibitor system. NIXT's product suite includes innovative formulations (e.g. Daily Smooth body wash, exfoliating mists, serums) targeting the huge consumer pain-point of unwanted hair and longer-lasting results between shaves[3]. Our A list celebrity partner (≈300 million IG followers) brings enormous marketing firepower and credibility – her involvement will drive instant brand awareness and viral reach. *Economics:* Star Lab invested $3M in NIXT's R&D and marketing.
- **Salmon Sperm (Skincare)** – A science-driven anti-aging skincare line centered on PDRN (polydeoxyribonucleotide) extracted from salmon sperm, a cutting-edge ingredient for skin regeneration. The line is endorsed by Dr. Michael Persky, a leading cosmetic surgeon, lending clinical credibility. Products include serums and creams positioned as premium solutions for skin rejuvenation. *Economics:* Dr. Persky is an equity partner (small stake) and scientific advisor; his clinic will also serve as an early distribution channel for professional-grade versions.
- **Soothe Stick (Skin Relief)** – A single-SKU, highly viral product – a portable "cooling" stick for instant relief of skin irritation, burns or insect bites. This affordable, impulse-friendly item will leverage TikTok and Instagram for challenges and user-generated content, driving organic virality. *Economics:* 100% owned by Star Lab. Priced as a mass-market item to drive volume and new customer acquisition.
- **Rough Cut (Men's Grooming)** – A men's grooming and personal care line developed with two NFL superstars. The NFL superstars personify modern

STARLABS

masculinity that balances ruggedness with self-care – an ideal fit for a men's brand. Rough Cut's product range will span beard care, hair styling, and skincare targeted at male consumers (with potential expansion into supplements or hair regrowth kits). With the NFL stars massive popularity (recent mainstream media buzz) and relatable personas, the marketing potential is huge. *Economics:* The two NFL players together take a 10% royalty and 10% equity stake (combined); Star Lab retains 90% ownership. We anticipate strong DTC sales among NFL fans and beyond, leveraging the player dedicated podcast and social media for authentic promotion. (Details of NFL players is disclosable with an additional NDA at our CRO's discretion).

4.2 Existing JV Brands

Star Lab holds minority equity stakes in two joint-venture brands that are already in the market: - **Made** – A beauty tools/accessories brand (15% equity held by SLH) generating ~US$1M in annual revenue. - **Actsyl** – A haircare innovation brand (15% equity held by SLH) also with ~US$1M/year in revenue.

These JVs provide modest current income and, more importantly, validate our operational capability and industry network. We leveraged these partnerships to refine our launch playbook and supply chain relationships on a smaller scale before full-scale launches.

(Pipeline: Beyond the above, we have two additional brands in development for 2027 launch and a seventh brand envisioned for 2028. These pipeline projects will further diversify our portfolio (e.g., a wellness supplement line, a functional food product) and may involve new celebrity partners relevant to their domains.)

STARLABS

5. Business Model & Monetization

5.1 Engine 1: CPG Portfolio

Our core business is selling consumer products through a mix of direct-to-consumer (e-commerce) and retail/wholesale channels. Revenue comes from product sales across our portfolio of brands. We expect gross margins of ~66–72% on these products, leveraging contract manufacturing and premium pricing power from celebrity branding. Each brand is structured as an asset-light venture: we partner with world-class third-party manufacturers (for example, T&R Biofab for skincare bioproducts) so we don't own factories, and we scale production via purchase orders as demand grows. We target an EBITDA margin of 20–25% at scale by focusing on high-margin niches (skincare, cosmetics) and controlling customer acquisition costs through organic influencer traction. Beyond product sales, the brand engine may generate ancillary revenue (e.g., licensing a product format to a larger company, or international distribution deals).

5.2 Engine 2: $STAR Token & Platform

Our second engine is the Star Lab platform and its Web3 monetization opportunities. This includes revenue from token sales (when we launch the $STAR token) and transaction fees or revenue share from any brands/projects onboarded onto our blockchain launchpad. In the long term, as the platform opens to third-party creators, we could earn fees by launching or hosting external brands. More immediately, $STAR token economics provides a revenue-share mechanism: 7–10% of SLH portfolio EBITDA will flow into the token ecosystem (as staking rewards, buybacks, or community distributions). This effectively turns a portion of operating profit into a loyalty and marketing spend that drives customer retention (by rewarding token holders). Additionally, token sales themselves (if we do a community token sale) can bring in capital that is earmarked for growth initiatives, and create a wide base of brand ambassadors who are financially incentivized to promote Star Lab brands.

STARLABS

5.3 Platform Upside

Our digital platform has potential beyond launching Star Lab's own brands. In the future, we can onboard third-party influencer projects onto our launchpad for a fee or equity stake, turning Star Lab into a *platform business*. This could unlock a scalable revenue stream without heavy capital investment in each brand. We also see potential in white-labeling our blockchain solution (for product authenticity and loyalty) to other consumer companies, generating B2B tech licensing revenue. These opportunities are not in our initial projections, but represent upside optionality. Overall, the combination of a tangible CPG business (Engine 1) with a high-multiple tech platform model (Engine 2) means Star Lab can generate both near-term cash flow and long-term equity value through network effects.

6. Go-To-Market Strategy

Our go-to-market playbook is designed to maximize the impact of our celebrity partnerships and create viral product launches:

- **Influencer-Driven Marketing Funnel:** Each brand launch is anchored by a headline celebrity, supplemented by a network of mid-tier influencers and grassroots user-generated content. For example, Our 300M follower celebrity might tease NIXT on Instagram, generating millions of impressions, while hundreds of micro-influencers receive free samples to review on TikTok and YouTube. We also engage relevant niche influencers (e.g., gym and grooming YouTubers for Rough Cut, dermatologists for Salmon Sperm) to lend authenticity.
- **Omnichannel Distribution:** We target roughly 40–50% of sales via direct-to-consumer (our brand websites) and 50–60% via retail/wholesale channels. Early on, we emphasize DTC to gather customer data and build brand heat online. Once a brand proves demand, we accelerate retail expansion via our LOI partners (HSM, Northern) and other retailers (e.g., specialty beauty chains for skincare, mass retailers like Target for Rough Cut)[4]. This "digital-first, then

STARLABS

retail" strategy ensures we enter stores with proven demand, aiding sell-through and negotiating power.

- **Retail Partnerships (LOIs):** We have secured letters of intent covering more than 20,000 retail doors in the US (via HSM) and distribution across 25 international markets (via Northern Response). These partnerships give us immediate shelf presence and volume. For instance, the HSM LOI implies ~1.4 million units of capacity in year one (mid-case ~US$34M gross retail sales, ~$17M net to Star Lab). Northern Response's global network similarly jumpstarts our overseas sales, projecting ~$41M net from their channels in Year1.
- **Cost-Effective Customer Acquisition:** Our celebrity and viral marketing strategy dramatically lowers customer acquisition cost (CAC). We estimate digital CAC in the ~$15–$80 range for DTC campaigns and only $5–$10 per customer via retail (because retail marketing costs are built into slightly lower wholesale margins). Given our expected lifetime value (LTV) per customer of ~$150–$450 (mid-case), we achieve an attractive LTV:CAC ratio above 3:1. Additionally, the $STAR token loyalty program will incentivize repeat purchases, increasing LTV and referrals at low cost (e.g., customers earn token rewards for purchasing and reviewing products, which encourages them to continue engaging).
- **Launch Hype & Community Building:** We treat each brand launch like a major event. In the pre-launch phase, we drop hints through the celebrity's social media (e.g., Our Celebrity's subtle "secret project" posts) and collect thousands of email signups via teaser landing pages. We orchestrate PR with exclusive stories to beauty editors and sports media to drive chatter. On launch day, we host live events or streams (for example, an Instagram Live with Our Celebrity demonstrating NIXT, or our NFL partners going to a TikTok challenge with Rough Cut). These generate press coverage and social media trends that propel the brand out of the gate.
- **Post-Launch Retention:** We leverage our token ecosystem to retain customers: early buyers might get NFTs or tokens that confer perks (e.g., an NFT that grants

STARLABS

a year's supply of product, or token holders get exclusive Q&A access with the celebrity). We implement referral programs and bundle offers across our brands (cross-pollinating customers from one brand to another). Our aim is to turn one-time buyers into a loyal community that not only repeats purchases but also participates in product development (via feedback polls, etc., potentially facilitated through tokenholder voting).

7. Web3 Token Ecosystem & Tokenomics

The $STAR token is a core innovation in our model, designed to convert customers into stakeholders and supercharge loyalty.

- **Token Supply & Allocation:** The token will have a fixed supply of 2 billion tokens. Distribution is planned as: 15% allocated to investors, 15% to the team (with 24-month vesting), 10% to partners (e.g., celebrities/influencers and advisors), 30% reserved for community rewards and ecosystem development, and 30% retained as treasury for future use (marketing, liquidity, etc.).
- **Utility & Rewards:** $STAR will function as a multi-faceted loyalty and governance token. Holders can stake tokens to earn rewards funded by a portion of Star Lab's brand portfolio EBITDA (target 7–10%). This essentially shares real economic value with our community of token holders, aligning them with our success. Additionally, tokens will grant access to exclusive perks: early access to product launches, special discounts, VIP event invitations (e.g., meet-and-greet with a celebrity partner), limited-edition merch and NFTs, and voting rights on certain decisions (such as which product variation to launch next). By holding $STAR, fans become part of the brand-building journey, not just consumers.
- **Ecosystem Structure:** Star Lab Fund (SLF) will manage the token treasury and distribution mechanics. For example, each quarter a portion of profits might be used to buy back tokens or distributed to stakers, and SLF oversees that process transparently on-chain. The token also ties the portfolio together: a customer who

STARLABS

loves one brand has incentive to try others in the Star Lab family if they're earning and using $STAR across all.

- **Launch Plan:** We intentionally delayed the token launch until our brands have market traction. This ensures $STAR has intrinsic value backing it (actual revenue and profits) and avoids speculative hype with no substance. Tentatively, we plan to roll out the token in 2027, after at least two major brands are launched. We may do a community sale or airdrop to early customers to distribute the 30% community portion. Regulatory compliance is key – we are structuring $STAR with counsel to emphasize its utility features so it isn't classified purely as a security. Regions like the US may have restricted token functionality initially (e.g., US users get utility but not profit-sharing until clear regulation), to ensure we launch safely within legal frameworks.
- **Long-Term Vision:** $STAR will help drive a network effect: customers are incentivized to promote the brands (since they share in success), and a vibrant token community becomes a marketing force. Over time, the token could enable decentralized input into brand decisions – a "Shark Tank for the community" where token holders vote on new product ideas or influencer partnerships. This community-driven approach can yield high engagement and organic growth that traditional brands can't match.

Figure: $STAR token allocation – 2 billion total supply distributed across Community, Treasury, Investors, Team, and Partners. This allocation ensures broad distribution and aligns incentives among all stakeholders.

8. Traction & Partnerships

- **Celebrity Partners Secured:** We have signed top-tier influencers to anchor our brands – An A list Celebrity for NIXT, Two well known NFL players or Rough Cut, and Dr. Michael Persky for Salmon Sperm. These partnerships (negotiated in 2022–2023) mean each brand comes with a massive built-in audience from day

STARLABS

one. Our talent deals are structured favorably (equity and royalty-based, no large upfront fees), aligning the celebrities' incentives with the brand's success.

- **Technology Built & Tested:** The entire digital platform and blockchain infrastructure is already developed and operational, contributed by Advantage Group's 68-engineer team at an equivalent cost of ~$30M. This is a huge barrier to entry for would-be competitors and means we are not using investor capital to build core tech – it's in place and ready to scale. This will be a development accelerator for integrating and deploying Stacks within 4 months of funding.
- **Manufacturing Partnerships:** Key manufacturing and R&D partnerships are secured, reducing execution risk. For instance, we have an agreement with T&R Biofab (a leading biomedical manufacturer) to produce the PDRN ingredient and skincare line for Salmon Sperm. We have backup manufacturers identified for all critical products to ensure supply continuity. Early test batches for NIXT and Rough Cut grooming line have been produced and validated for quality.
- **Distribution LOIs:** We possess LOIs guaranteeing initial distribution reach: HSM for U.S. retail placement (20k stores) and Northern Response for international markets. These partnerships substantially de-risk our sales ramp – we won't be scrambling for retail adoption. They also signal confidence from seasoned distribution players in our brands. Combined, HSM and Northern are expected to contribute roughly 30% of our Year1 revenue.
- **Early Revenue & Validation:** Our existing JV brands (Made and Actsyl) already generate revenue (~$2M/year combined), demonstrating our team's ability to manage product sales, distribution, and growth. Additionally, small pre-launch batches of our flagship products have been trial-sold online in late 2025 to gauge consumer interest – with encouraging results (e.g., early NIXT samples quickly sold out via a limited Instagram drop).
- **Founder Commitment:** The founding team has invested ~US$500K of their own capital to date and has taken no salaries. We've proven we can operate lean; for over a year we ran R&D on a shoestring budget (leveraging our affiliate

STARLABS

resources). This financial discipline means the incoming $25M will go directly into growth initiatives. Our “skin in the game” and willingness to defer personal benefit until success is realized should give investors confidence – we are fully aligned to create value.

9. Financial Projections

We project aggressive yet achievable growth for Star Lab, driven by the rollout of our brand portfolio and expanding channels. The figures below summarize our base-case (mid-case) projections for the first three full years of operations (2026–2028), during which four core brands are launched. We also outline an upside scenario illustrating additional potential.

- **Year 1 (2026)** – Launch Year: We forecast approximately **$275 million in gross product sales**, which translates to about **$192 million in net revenue** to Star Lab (after retailer/distributor cuts). This assumes mid-year launches for NIXT and Salmon Sperm (so not a full year of sales) and initial retail rollout through HSM in late 2026. The revenue mix in Year1 is roughly 50% DTC and 50% wholesale. By brand, NIXT and Salmon Sperm drive the bulk of Year1 revenue (NIXT ~$110M net, Salmon ~$80M net), while Soothe Stick contributes a few million and Rough Cut is negligible (planned Q4 ’26 launch). We anticipate a **small EBITDA loss or breakeven** in Year1 as we invest heavily in marketing and inventory for launches, but the strong gross margins keep us near break-even.
- **Year 2 (2027)** – Scale-Up: With a full year of sales for the 2026 launches and the addition of Rough Cut (men’s line) scaling, Year2 explodes: we project **$1.14 billion gross** (~$830 million net revenue) in 2027. This is over 4× Year1, reflecting both organic growth and new revenue streams. Rough Cut/ Men becomes a major contributor, potentially overtaking NIXT as the top seller by late 2027. We expect NIXT to roughly double to ~$230M net[5], Rough Cut to contribute on the order of $300M net (given the NFL partners popularity), Salmon Sperm to grow to ~$250M+, and other sources (Soothe + new pipeline launches in late 2027)

STARLABS

adding tens of millions. With scale, **EBITDA turns positive** in Year2; we target ~10% EBITDA margin in 2027 (~$80M EBITDA) as marketing spend as a percentage of revenue drops significantly due to network effects.

- **Year 3 (2028)** – Consolidation: By 2028, we expect **$1.43 billion gross** (**~$1.07 billion net**) revenue, reflecting a more moderate 29% YoY growth as the initial four brands mature. At this stage, all four core brands are global, and we have 1–3 new brands contributing incremental revenue. Rough Cut and Salmon Sperm are the two largest lines by revenue, each potentially in the $300–400M net range, followed closely by NIXT (which levels off around ~$270–300M). Soothe Stick and two newer brands launched in 2027–28 together might contribute ~5–10% of revenue. We aim to sustain ~20%+ EBITDA margins in 2028, yielding around **$220–$250 million in EBITDA**. Net margins expand thanks to higher DTC mix (we expect closer to 60% DTC by Year3 as our online channels strengthen brand loyalty, improving overall net take rates)[6][7]. These results would position us as a highly attractive IPO candidate or acquisition target, with over $1B in revenue and robust profitability.

- **Upside Case:** In an upside scenario, where our execution is ahead of plan or additional brands/products launch sooner, we could see revenues ~50% higher than base by 2028. For instance, launching more like 6 brands by 2028 (versus 4) or achieving higher market share per brand could drive **~$1.6B net revenue and ~$350M EBITDA by 2028**. In this scenario, our growth from 2026 to 2028 would be steeper (with Year3 perhaps ~$1.5B+ net). We consider this upside plausible given the inherent virality of our model – if one brand really hits a cultural nerve, sales could vastly exceed our base assumptions. Conversely, even in a *conservative* scenario (half our base revenue), we'd still have ~$500M net by 2028, which would underpin significant value. Thus, the risk/reward skews positively.

STARLABS

Figure: Projected net revenue by brand (mid-case scenario). NIXT (blue) and Salmon Sperm (orange) drive Year1, with Rough Cut (gray) surging by Year3. Total net revenue exceeds $1B by 2028.

10. Valuation Framework

We have evaluated Star Lab's valuation using multiple methods to ensure our $150M pre-money ask is well-justified.

- **Asset Contributions:** The Advantage Group tech platform (already built and deployed) represents a $30M investment that Star Lab does not need to spend. In essence, new investors get this asset "for free" inside the company. Backing this out, $150M minus $30M implies only $120M of value ascribed to our brand portfolio and future business, which we believe is very reasonable given our traction.
- **Discounted Cash Flow (DCF):** A conservative DCF analysis of our base-case cash flows (with a high discount rate and modest terminal value) yields a present value in the ~$70–$120M range. This essentially assumes we only achieve around $42M revenue and $10.6M EBITDA by 2028 (a *fraction* of our actual projections). Even under that cautious scenario, the DCF supports a large portion of our valuation. If we consider a more optimistic (but still realistic) case – say $120M revenue and $36M EBITDA by 2028 (still below our base plan) – simple multiples (2× revenue or 10× EBITDA) suggest a $240–$360M enterprise value. Our $150M valuation is well below that, indicating substantial upside for investors if we execute.
- **Market Comparables:** Influencer-led brands have attracted high acquisition multiples. As noted, Coty paid ~$600M for 51% of Kylie Cosmetics (implying $1.2B valuation for a company with ~$200M annual revenue)[1]. That's roughly 6× revenue. If Star Lab's portfolio hits $1B+ revenue by 2028, even a 2× revenue multiple would be $2B (over 13× our valuation), and a 3× multiple $3B. Another comp: Dollar Shave Club (men's grooming) sold to Unilever for $1B on ~$200M

STARLABS

revenue (5× revenue). Given our growth rate and tech angle, we could also attract tech-like multiples on EBITDA (20–30×). In short, if we deliver on projections, a $150M entry valuation offers a very attractive multiple on invested capital by traditional industry standards.

- **Token Value Add:** Traditional valuation methods might undervalue the network effects and community loyalty fueled by our $STAR token. The token ensures a built-in consumer investor base and could accelerate growth (effectively a form of customer-funded marketing). This "token premium" is hard to quantify, but it means our company could command a higher valuation than a similar business without a token, due to higher customer engagement and lower marketing costs. It's an upside factor that savvy investors recognize in Web3-integrated models.
- **Balanced Approach:** The $150M valuation is set as a fair mid-point balancing our tangible assets and future potential. It assumes some execution success is already priced in – which is reasonable given how much is in place (products ready, contracts signed, tech built). At the same time, it leaves considerable room for new investors to profit. Considering industry benchmarks, ~$150M equity value equates to ~3× our base-case 2028E sales or ~14× 2028E EBITDA – arguably conservative for a high-growth portfolio. We feel this is a win-win valuation: it reflects what we've built so far and the immediate pipeline, yet gives new capital a large share of the upside we aim to create.

(At ~$150M, investors are effectively paying ~$120M for the consumer business when netting out the tech asset value – a compelling entry point supported by both our DCF analysis and comparables.)

11. Risk Analysis & Mitigation

No venture is without risks. We have identified key risk factors and instituted strategies to mitigate them:

STARLABS

- **Market Adoption & Consumer Demand:** A product could flop if consumer interest isn't as high as anticipated or if a trend shifts. *Mitigation:* We diversify across multiple brands and product categories to avoid reliance on a single concept. Before full launches, we conduct extensive market testing (focus groups, limited drops) and iterate based on feedback. Also, celebrity-backed launches inherently come with a baseline of consumer curiosity and initial demand, reducing the chance of complete failure. If a brand underperforms post-launch, we will pivot marketing strategies or even shelve that brand and focus resources on others (our platform and team are flexible across projects).
- **Execution & Scaling:** Rapid growth and multiple concurrent launches strain operations – risks include supply chain issues, quality control problems, or marketing execution shortfalls. *Mitigation:* Our team's experience in scaling businesses is crucial. We've lined up reliable contract manufacturers and backup suppliers for critical components to ensure redundancy. Inventory planning is done conservatively initially to avoid overproduction. We stagger brand rollouts (as reflected in our roadmap) to concentrate efforts and avoid overextension. We are also investing in strong project management, with dedicated launch leads and playbooks for each brand. If needed, we have budgeted to bring in external expertise (consultants or agencies) to bolster our team during peak periods.
- **Talent & Partner Risk:** Our success depends on key personnel and on celebrities staying engaged. There's a risk a co-founder or top exec could leave, or a celebrity partner might lose enthusiasm or face competing priorities. *Mitigation:* We have equity incentive plans to retain team members (everyone's invested in the upside) and a mission-driven culture that's exciting to work on (merging pop culture with tech). For celebrities, contracts include performance clauses (e.g., minimum number of social posts, appearances). We maintain close relationships and make our star partners feel like part of the company, not just spokespeople. If a celebrity does reduce involvement or exits, we have contingency options: ramp up paid marketing to compensate for their promotion, or onboard additional

STARLABS

influencer partners to fill the gap. Our multi-celebrity portfolio also ensures no single talent collapse can derail the whole company.

- **Brand Image & PR:** Tying brands to famous individuals means any scandal or negative press around them could hurt the brand's image. *Mitigation:* We vet partners carefully for reputation. Still, if an incident occurs, we're prepared with crisis PR strategies: we can temporarily distance the brand from the person (shifting marketing to product-centric messaging), and if extreme, rebrand the product line. Because we have multiple brands, one brand's PR issue won't sink the platform – others remain unaffected. We also have insurance for certain endorsement-related risks, and morality clauses in contracts to allow termination if needed.
- **Competitive Pressure:** The consumer products space is competitive. Big FMCG players or copycat startups might attempt to replicate our model or outspend us. *Mitigation:* Our head start in blending blockchain with influencer-led brands gives us a moat. We've locked in partnerships with some of the most recognizable names, limiting who competitors can partner with. Our community ownership aspect is culturally and technically hard for traditional companies to mimic quickly. We stay agile – if a competitor crowds a niche, we can refocus on less contested opportunities (having the capability to launch new brands rapidly is a strategic hedge). Ultimately, our best defense is execution: building brand love and community loyalty that can't be easily disrupted by a new entrant.
- **Regulatory & Legal:**
- *Product Regulations:* Beauty and wellness products must comply with health/safety laws (FDA regulations, etc.). Non-compliance or a product causing adverse reactions could lead to recalls or lawsuits. *Mitigation:* We follow strict quality control and testing protocols. All formulations are developed with certified labs and undergo stability and dermatological testing. We ensure proper labeling and legal review of claims. We also carry product liability insurance to protect against lawsuits.

STARLABS

- *Crypto/Token Regulations:* The $STAR token could be viewed as a security in some jurisdictions, risking regulatory action. *Mitigation:* We have top blockchain legal advisors. The token is being structured with utility at the forefront (e.g., rewards, governance) and we avoid explicit profit language. We're prepared to geo-fence or restrict certain features in the US or other markets if laws require (for instance, US purchasers might get a pure utility token without profit share). If needed, we would explore SEC-compliant token offerings or registrations. Launching the token later gives us time to adapt to evolving regulations.
- *Intellectual Property:* We need to protect our brand IP and any proprietary formulas. There's also the risk of counterfeit products once they're popular. *Mitigation:* We've filed trademarks for all brand names and logos and will aggressively defend them. We are exploring patent protection for unique formulations (e.g., NIXT's inhibitor formula). We will use our blockchain system to authenticate products (consumers can verify genuine products on-chain), which helps combat counterfeiting. Our legal team is poised to take action against infringements or knock-offs.
- **Macro & Economic:** A global recession or shifts in consumer spending could slow our sales, as our products—while fairly priced—are discretionary. Inflation could also squeeze margins by raising costs. *Mitigation:* Beauty and self-care often have a "lipstick effect" – affordable luxuries tend to hold in recessions (lipstick sales famously stay strong). Nonetheless, our portfolio spans price points: from a ~$20 Soothe Stick to premium skincare, allowing consumers to down-trade within our brands if needed. We can offer promotions or value bundles to maintain volume in a downturn. On costs, we have some padding in margins to absorb commodity inflation, and we can adjust pricing strategically if necessary. Our lean overhead means we can remain profitable even if growth tempers; we won't overspend on fixed costs.
- **Technology & Security:** As a tech-integrated company, a major tech failure (cyberattack, data breach, or blockchain exploit) could damage our operations or

STARLABS

reputation. *Mitigation:* We prioritize security in all systems. Our blockchain smart contracts will undergo external audits and we'll maintain a bug bounty program. Customer data is stored securely with encryption, and we use reputable cloud infrastructure with backups and auto-scaling to handle traffic spikes. We have contingency plans: if the blockchain component faces issues, we can temporarily operate products without it (ensuring continuity of sales and fulfillment).

- **Exit & Liquidity for Investors:** Since we are a private company, investors can't freely liquidate before an exit, which is a typical startup risk. *Mitigation:* We are building a company that can go public or be acquired at a large scale in a reasonable timeframe (3–5 years). We keep this end-game in mind strategically. Additionally, the introduction of the $STAR token could offer an interim liquidity avenue; for example, if we distribute some tokens to equity investors or if they purchase in the token sale, those tokens could potentially be sold on exchanges earlier than an equity exit (subject to lockups and regulations). We will also consider secondary share sales in late-stage rounds to allow partial investor exits as valuation increases. Ultimately, our focus on achieving IPO-scale metrics by 2028 supports a clear path to liquidity.

- **Contingency Plans:** We maintain fallback plans for extreme scenarios. If a product launch underperforms, we'll cut marketing spend and reassess rather than throwing good money after bad. If overall revenue fell short and cash ran low, we could pause new launches to conserve cash and extend runway (the existing brands' revenue could sustain core operations at a lower burn). In a worst-case downside (few brands hit and we exhaust cash), our brands and IP still have tangible value – we could sell one of the more successful brands to a larger company to recoup capital. This ability to partition and sell assets (since each brand is a separate venture under SLH) provides a safety net to recover investor capital even if the holistic growth story takes longer to play out.

STARLABS

12. Use of Funds & Fundraising Structure

We are offering investors an equity stake in Star Lab Holdings in this round. The $25M raise will be in the form of preferred equity (or SAFE converting at the $150M valuation) and will represent approximately 16.7% of the company post-money.

Currently, SLH is ~75% owned by Andrea Horblitt, with the remainder held by co-founders Kyle Rudden (~15%) and Colleen Ferrier (~10%) (pre-money). This means new investors coming in at $150M pre-money would collectively own roughly one-sixth of the company post-investment, aligning incentives with the founding team (who will still own ~83%).

Figure: Current ownership structure of Star Lab Holdings (pre-investment). Andrea Horblitt (Founder/CEO) holds ~75%, Kyle Rudden ~15%, Colleen Ferrier ~10%. This is prior to the $25M capital injection.

Use of Funds: The $25M is budgeted strictly for scaling the business – none is going to founder liquidity or unnecessary overhead. Broadly, the funds will be allocated as: - **30–35% – Brand Launches & Inventory:** Financing production runs, raw materials, and inventory for product launches. This includes tooling or molds for new products, initial bulk orders from manufacturers, and working capital to ensure we can meet the high demand projected (especially for retail). It also covers product development costs for pipeline brands. - **35–40% – Marketing & Community Building:** This is our largest investment area, as it fuels growth. It covers influencer campaign costs (content creation, affiliate fees), digital advertising, PR events, and community initiatives (like token launch costs, community management, and possibly an initial token reward pool). We will aggressively build our brand awareness and user base with these funds, knowing that our CAC is efficient. - **15–20% – Team & Operations:** Key hires to expand our team as we launch multiple brands (brand managers, supply chain coordinators, customer support, etc.) and general operational expenses to support scaling (fulfillment center contracts, software, legal/accounting, etc.). We operate lean, but we will invest in talent where needed to ensure flawless execution. - **5–10% – Technology &**

STARLABS

Compliance: Ongoing development and maintenance of our tech platform, including security audits for the blockchain, updates to the launchpad app, and integrating the token. Also, legal compliance costs: regulatory advice for token issuance, patents/trademarks, and any necessary filings in new markets. Our platform is built, so this is more about incremental improvements and ensuring robustness/security. -
5–10% – Contingency: A reserve for unforeseen expenses or strategic opportunities (e.g., if a chance arises to sign an additional celebrity or acquire a complementary small brand, or simply to buffer against economic uncertainties). We want to have a cushion so we don't need to seek additional funds prematurely. This also ensures we can handle any cost overruns in the above categories without jeopardizing our plan.

We anticipate that this $25M infusion will carry us to profitability. Should we decide to raise additional capital, it would likely be to accelerate even further (e.g., launch even more brands or enter a major new geography aggressively), but our base plan does not rely on any funding beyond this round.

Equity and Token Dynamics: Investors in this round get equity in SLH (which owns both the brand portfolio and will capture token-related economics via SLF). We recognize the unique nature of our token, and while $STAR will primarily be distributed to community/users, we are considering allocating a small portion of the token supply to strategic investors or as bonus to equity holders. For example, we might reserve (say) 1–2% of the token supply that early investors can participate in during a private token sale at a future date, or distribute tokens pro-rata to equity owners at the time of token generation. This way, investors benefit from both equity appreciation and token upside. Any such plans will be structured in compliance with securities laws and at the appropriate time; the immediate raise is pure equity.

Finally, governance is structured to protect investors: the SLH Board will include investor representatives, and major decisions (e.g., token launch terms, large asset sales) will require board approval. We aim to treat the $STAR token as an additive

STARLABS

mechanism for value, not something that dilutes or harms equity owners. In fact, by driving community engagement, the token should boost the equity value.

13. Team & Management

Our team combines deep domain experience in consumer products with cutting-edge blockchain and marketing expertise:

- **Andrea Horblitt – CEO (Star Lab Holdings) / Chairwoman (Star Lab Fund)**
  Andrea Horblitt is the Founder of Star Lab, which she formed in 2021 after recognizing the future of interconnections of celebrity/influencer branding and blockchain-based consumer engagement. She brings 25 years of experience related to celebrity talent management and celebrity-backed products. Andrea's extensive network of "A-List" celebrities enables her to match top-tier talent with innovative product ideas, creating truly authentic celebrity brands on terms that engender long-term brand success and strong investor returns. Mentored by advertising legend George Lois, Andrea created Suckitz (nutraceutical lollipops), and one of the earliest and most successful celebrity viral marketing campaigns, generating substantial sales, and spurring intense social media interactions between fans and celebrities like Lindsay Lohan, Lance Bass, and Sofia Vergara. In her other endeavors, Andrea has worked with celebrities and mega-influencers such as 50 Cent, Carrie Underwood, Kirstie Alley, Lance Bass, Cameron Dallas, Jake Paul, and Logan Paul, among others. Andrea's experience includes brand development, manufacturing, marketing, and venture finance, spanning beauty (e.g., skincare, haircare, bodycare, cosmetics), food, beverages, wellness, fashion, jewelry, and other general merchandise. As a serial inventor, Andrea has patented (or is in the process of patenting) numerous products germane to Star Lab.
- **Oz Sultan – CEO (Star Lab Fund) / Advisor (Star Lab Holdings)**
  Oz Sultan is a veteran Blockchain, Big Data, and counterterrorism strategist with more than two decades of experience advising major corporate, governmental, and global organizations. He has worked with U.S. PeaceTech Lab, The Economist, and various enterprise clients on technology-driven risk mitigation,

STARLABS

digital transformation, and data strategy. Oz is the Founder of Sultan Interactive Group (SIG), a boutique strategy and enterprise blockchain firm specializing in RWA (Real-World Asset) digital asset tokenization, cryptocurrency policy, and large-scale data strategy. Under Oz's expert-based leadership, SIG has delivered high-impact solutions for clients including IBM, MetLife, Xbox, leading CPG brands, multiple startups, and a wide portfolio of ICO and blockchain initiatives. Bridging his policy expertise with deep technical fluency, Oz is recognized for shaping forward-thinking blockchain frameworks, advising on digital economy regulation, and architecting enterprise-level tokenization models. His work sits at the intersection of emerging technology, national security considerations, and global innovation strategy. Oz continues to play a pivotal role in guiding organizations through the complexities of Web3, digital assets, and data ecosystems ensuring they adopt scalable, compliant, and future-ready solutions.

- **Colleen Ferrier – President (Star Lab Holdings)**
  Colleen Ferrier is a marketing strategist with 20+ years guiding companies from early-stage growth to multimillion-dollar exits. Prior to Star Lab, Colleen served as the Chief Operating Officer of Infomercials Inc. and Chief Marketing Officer of SCF Direct, leading teams across creative, operations, and revenue-focused functions. Colleen has scaled brands past $500M in revenue, blending creative storytelling with rigorous, data-driven execution. Her core expertise spans growth strategies, brand development, revenue optimization, and partnership development. A natural team leader and mentor, she develops high-performing creative and marketing teams that elevate brand influence and accelerate financial performance. Colleen is an early adopter of new media innovation, leveraging podcasting as a marketing and thought-leadership tool to amplify brand influence, garner consumer trust, and drive sustainable long-term growth. Colleen is the recipient of multiple Electronic Retailing Association Moxie Awards, underscoring her track record in launching award-winning television, retail, digital, and social media campaigns. As President of Star Lab Holdings, Colleen is instrumental in crafting the firm's overall strategy as well as driving future growth of Star Lab Holdings and Star Fund.

- **Kyle Rudden – CFO/COO (Star Lab Holdings & Star Lab Fund)**
  Kyle Rudden is an expert in global corporate finance, capital markets, and emerging technologies with experience across the Wall Street and startup ecosystems. As a former Institutional Investor–ranked equity analyst, he founded and led J.P. Morgan's Global Energy Research Group, overseeing coverage of $2 trillion in market cap and managing a team of over 20 senior analysts across the U.S., Europe, Asia, and South America. Kyle later co-founded an

STARLABS

energy-focused M&A advisory boutique (sold to Black & Veatch) specializing in bankruptcies and distressed assets. Kyle co-founded a firm that helped develop blockchain-enabled sustainable supply chain technology and collaborated with S&P Dow Jones and Bloomberg creating sustainability-related equity indexes. Kyle has appeared on CNBC and CNN and quoted in media such as the Wall Street Journal, Barron's, and Financial Times. His research is included in the Kellogg School of Management's MBA curriculum, and he has contributed to books including: The Smartest Guys in the Room: The Amazing Rise and Scandalous Fall of Enron; Mergers and the Restructuring of the Global Energy Industry; and Science of Algorithmic Trading and Portfolio Management. As a volunteer, he served as a FEMA Incident Commander, bringing unique operational and crisis-management skills.

- **Manos E. Megagiannis – Chief Technology Officer (Star Lab Fund)**
  Manos E. Megagiannis is a senior technology executive with extensive experience across systems architecture, cybersecurity, financial services, and advanced software platforms. He brings a proven ability to design, secure, and scale mission-critical technology infrastructures for high-growth and regulated environments. A multi-time Founder and CTO, Manos has led technology strategy from early architecture and product development through enterprise deployment and global operations. He has architected high-availability, fault-tolerant systems supporting millions of users and platforms responsible for billions of dollars in transactions, consistently aligning technology execution with business and investment objectives. Manos also brings deep expertise in distributed systems, cryptography, public key infrastructure (PKI), and secure system design, informed by hands-on leadership in penetration testing, incident response, forensic investigations, and disaster recovery for corporate and government clients. His ability to translate complex technical and security considerations into clear strategic decisions makes him a key contributor to Star Lab Fund's long-term technology vision and growth.

- **Solomon Onyebuchi – Chief Marketing Officer (Star Lab Fund)**
  Solomon Onyebuchi is a Certified Business Analyst and an information systems expert, with specialty expertise in blockchain marketing, token ecosystems, and Web 2.0 community strategies. Solomon has advised many Web3 organizations and blockchain initiatives across the world. Solomon led community and growth strategy for Pig Finance ($PIG), which reached a peak market capitalization of $6 billion, demonstrating his ability to scale user adoption and build high-engagement decentralized communities. In addition, Solomon has 15+ years experience in the entertainment industry as a music executive, promoter,

STARLABS

and talent manager where he developed artists, coordinated events, and built cross-border entertainment networks. His perspectives on the intersections of technology, entertainment, and popular culture enable Solomon to create and scale innovative “Web3 + Web 2.0” brands and real-world asset tokenization ecosystems. Solomon is the founder of EDIF (Education Is Free), a non-profit that develops education, empowerment, and digital literacy programs for youth communities and underserved populations in Nigeria, a leader in grassroots impact and community development.

- **Nicole Andani – Vice President (Star Lab Holdings)**
  Nicole Andani is a global consumer brand specialist and executive with over 25 years of experience in sales and marketing, specializing in international retail and direct-to-consumer (DTC) growth marketing, having scaled many brands from launch to hundreds of millions of dollars in annual revenue. Before joining Star Lab as Vice President, Nicole spent 20 years at Northern Response International, one of Canada’s largest marketing and distribution companies. Nicole rose through the ranks to become Northern Response’s Vice President of International Sales and Marketing, where she led the international expansion of numerous brands into 90 global markets and helped grow multiple products to $300–500 million in annual revenue. Through long-standing partnerships with Guthy-Renker, Nicole helped launch and scale brands such as Proactiv, Meaningful Beauty (Cindy Crawford), WEN (by celebrity hairstylist Chaz Dean), Sheer Cover, and Malibu Tan. Nicole is the founder of Start Me Up, where she advises founders and inventors on brand/product incubation, licensing, and international expansion. She mentors young entrepreneurs through non-profit Futurpreneur Canada, and has served as an Awards Judge for the prestigious Moxie Awards’ annual Industry Awards.

- **Shayne Ferrier – Executive Director (Star Lab Holdings)**
  Shayne Ferrier brings more than 20 years of experience in brand expansion, revenue leadership, and community-centered service delivery. In his role at Spring Gardens Senior Living, he blends operational excellence with a deep commitment to human-centered care, positioning the organization as both a trusted service provider and a meaningful community partner. Shayne has built a reputation for aligning mission with measurable outcomes, strengthening occupancy, enhancing resident and family engagement, and developing services that increase long-term value. His leadership approach emphasizes empathy, trust, and strategic relationship-building across healthcare networks, and among local stakeholders and internal teams. He oversees strategic sales initiatives, community partnerships, and organizational growth. He has consistently

STARLABS

optimized key performance metrics by implementing scalable systems, improving cross-team workflows and elevating brand reputation through transparent, service-first communication. Under his leadership, Spring Gardens Senior Living has expanded its reach while maintaining operational discipline. Shayne's work ensures that success isn't defined solely by numbers, but by community impact, integrity, and the quality of care families can depend on.

- **Jason Gastwirth – Advisor (Star Lab Holdings)**
  Jason Gastwirth is an entertainment executive with nearly 20 years of experience shaping some of the most recognized live entertainment brands in the world. Most recently, he served as President of Entertainment at Caesars Entertainment, where he oversaw one of the largest entertainment portfolios in the hospitality industry. Prior to Caesars, Jason held senior leadership roles at top-tier hospitality and consumer brands, including as Chief Marketing Officer of Palms Casino Resort and as the Vice President of Casino Marketing & Entertainment at Las Vegas Sands Corp. Jason's background blends creative entertainment programming with disciplined marketing strategy, positioning venues and brands for high-impact audience growth. Before he moved into entertainment leadership, he built a foundation in strategy and operations through roles at Gap Inc. and global consulting firm Booz Allen Hamilton, where he advised large companies on brand positioning, organizational optimization, and long-term growth. A committed community leader, Jason also serves as President of the Vegas PBS Board of Directors, championing public media initiatives and expanding educational access across Southern Nevada. In his advisory work, Jason combines deep industry expertise, strategic insight, and a passion for live experiences to help organizations scale thoughtfully and sustainably.

- **Loretta Joseph – Advisor (Star Lab Holdings)**
  Loretta Joseph is a globally-recognized FinTech and regulatory advisor with over 25 years of experience including financial markets, policy, and emerging technologies. She is currently a blockchain consultant to the OECD, advising global governments, policymakers, and global organizations on the responsible adoption of blockchain technology. She serves as FinTech and regulatory consultant to governments around the world. She is a Director of Paradym Global and Director of Market Development at SSX. Previously, she held board and executive positions at leading global investment banks that include Deutsche Bank, Credit Suisse, Macquarie Group, RBS, and Elara Capital. Loretta's experience spans global capital markets and asset classes, and she has advised banks and investors on risk, portfolio exposure, and foreign transactions. Loretta

STARLAB

is a member of the papal council of Humanity 2.0, developed by the Dicastery for Promoting Integral Human Development at the Holy See, and holds advisory and academic roles with UWS Business School, Blume Ventures, and industry blockchain associations. Loretta is also a Lifetime Fellow of the Australian Digital Currency and Commerce Association, and has received awards for leadership and social impact, including FinTech Australia's Female Leader of the Year, and Leader of the Year.

- **Barry Shaich – Star Lab Fund (Egg Beauty Labs)**
  Barry Shaich is a seasoned beauty industry founder and executive with a record of building, scaling, and exiting multiple global brands. As the Founder and CEO of Egg Beauty Labs, Barry oversees product development, brand strategy, and expansion across beauty and men's grooming categories. Throughout his career, he has driven transformative growth and successful exits for some of the industry's most iconic brands including Aveda (sold to Estée Lauder), KMS (KAO), Graham Webb (Wella), American Crew (Revlon), and Woody's (which he built from the ground up, eventually selling it to American International Industries). Barry played a pivotal role in the digital reinvention of Dermalogica, designing and leading the modernization of the brand's online ecosystem and consumer engagement, all of which supported Dermalogica's acquisition by Unilever. In addition, Barry has advised other category-defining brands including Dollar Shave Club, Floyd's 99, HeadBlade, and Regis. With his experience across product research and development, brand elevation, digital transformations, and exit strategy, Barry brings the rare combination of creative insights, operational depth, and commercial acumen to helping new and established brands scale in a sustainable way, create long-term value, and position themselves for acquisition.

- **Howard V. Lewis – Star Lab Fund (Egg Beauty Labs)**
  Howard V. Lewis is a seasoned beauty industry executive with extensive experience scaling global brands and overseeing complex distribution networks. Throughout his career, Howard has held senior executive and C-Suite executive positions at some of the most influential companies in the industry – including Aveda, L'Oréal, Sebastian, Sundial Brands (Shea Moisture), and Wella – where he led growth strategies across sales, operations, and brand development. Howard served as COO of Distribution for Star Beauty Group (unrelated to Star Lab), one of the nation's largest beauty supply distributors, where he headed operations, multi-market expansion, and omni-channel marketing. Howard is recognized for his leadership, team development, and ability to align brand identity with scalable distribution and sales strategies. His deep industry

STARLABS

knowledge and hands-on operational experience continue to influence the evolution of the beauty, men's grooming, and personal care landscape.

- **Josanta Gray Emagano – Star Lab Fund (Egg Beauty Labs)**
  Josanta Gray Emagano is a senior beauty industry executive with experience across marketing, operations, and celebrity branding. Josanta served as the Chief Operating Officer of Beauty Bakerie Cosmetics, where she helped to scale one of the industry's most innovative indie beauty brands. Prior to Beauty Bakerie, Josanta was the Chief Marketing Officer of Nude Sugar by Toni Braxton, where she led brand strategy, new market entry, and omni-channel expansion. Earlier in her career, Josanta worked as a licensing agent at CAA (Creative Artists Agency) representing celebrity and lifestyle brands, an experience that gave her unique perspectives on celebrity partnerships, licensing strategy, and entertainment-driven brand building. In addition to bringing her powerful blend of marketing insights, operational leadership, and celebrity branding expertise, Josanta's keen ability to align cultural relevance, brand storytelling, and business strategy make her an invaluable addition to the team.

Organizational Structure: Andrea, as CEO of SLH (the operating company) and Chair of SLF (the fund/token entity), provides unified leadership across both arms. Colleen and Kyle run the operations of SLH, while Oz and Solomon run the SLF side, with Kyle bridging financial operations between them. This structure ensures tight coordination between product operations and token/community initiatives. We have a lean core team (currently 6 full-time executives and managers) supported by our broader network (the 68-person development team at Advantage Group, plus contracted specialists in design, logistics, etc.). As we launch each brand, we intend to add dedicated brand managers and small support teams under Colleen's supervision to handle the growing portfolio.

Figure: Organizational chart – Star Lab Holdings (SLH) and Star Lab Fund (SLF) with key leadership. The diagram shows the dual structure and overlapping executive roles of SLH and SLF.

Our team is fully committed to Star Lab's success. All founders and key team members are working full-time (and have been for many months) without drawing salaries, demonstrating our belief in the venture. We have worked together for years and have a

STARLABS

track record of prior collaborations in consumer marketing and tech initiatives. This cohesion and trust allow us to move quickly and execute efficiently.

We have also assembled a strong advisory network (not listed for brevity) that includes veterans from the beauty industry, a former CFO of a publicly-listed CPG firm, and legal advisors well-versed in crypto and cosmetics regulation. These advisors augment our internal capabilities and will be instrumental as we scale and navigate new challenges.

14. Roadmap & Exit Strategy

Roadmap (2024–2027): Star Lab's roadmap is aggressive but carefully phased:

- **2024:** Foundation building year. Signed MOUs and contracts with initial celebrity partners (by early 2024 we had our 300M+ follower, A list celebrity and Dr. Persky onboard, and by mid-2024 the NFL partners). Completed development of MVP products for NIXT and Salmon Sperm and began testing small batches. Finalized Advantage Group tech platform integration. Essentially, all R&D completed and the supply chain lined up by the end of 2024. Also, community building quietly begins (social media accounts, teaser content, etc. without revealing full details).
- **Early 2025:** Soft launch and market testing. We rolled out limited pre-sale campaigns for Soothe Stick and a beta launch of NIXT to collect user feedback. Continued to refine formulations and UX. By mid-2025, we also expect to close the $25M funding (this round), enabling us to scale the team and inventory for full launch.
- **Late 2025:** Token dry-run and platform polish. We might launch a testnet version of $STAR or a loyalty points system to experiment with engagement tactics in a controlled environment. Meanwhile, the e-commerce platform and backend systems undergo load testing in preparation for major traffic.
- **Q1 2026: Launch of Salmon Sperm and Soothe Stick**. We plan a dual product launch event, leveraging Dr. Persky's authority for PR in medical and beauty

STARLABS

circles, and influencer buzz for Soothe Stick's fun appeal. Both launches start as DTC-focused (with online campaigns and direct sales) to build hype before retail distribution. Simultaneously, we'll finalize retail orders via HSM to stock Salmon Sperm in high-end beauty retailers and Soothe Stick in drugstores by Q2.

- **Q2 2026: NIXT Retail Rollout (Hair Care)**. Around spring 2026, NIXT products hit the shelves across 20,000+ US stores per the HSM partnership. This will be one of our biggest revenue catalysts of 2026. Our A list celebrity will be heavily involved in the marketing push – expect nationwide media appearances and social media blitz. We'll support this with an omnichannel campaign (in-store displays, online ads targeting Our Celebrity's followers, etc.). Internationally, Northern Response begins rolling out NIXT and Salmon Sperm in select markets (Canada, UK, Australia likely first).
- **Q4 2026: Launch of Rough Cut**. Timed with the NFL season and holiday grooming gift season, we debut Rough Cut in late 2026. The NFL partners will promote it during the NFL season (integration into their podcast content, tie-ins during football coverage, etc.). We start DTC to leverage the viral interest (special "NFL fan Kit" online exclusive set), and plan retail entry by Q2 2027 (likely Target, Walmart or similar) once the brand has momentum. Also in late 2026, we aim to beta launch the $STAR token in a limited capacity – perhaps an initial token distribution to early customers or community members, to test staking and reward mechanisms.
- **2027: Expansion and New Brands**. With four core brands in the market, 2027 is about expansion and adding breadth. By mid-2027, Rough Cut should enter major U.S. retail chains, and we'll expand Salmon and NIXT deeper into Europe and Asia (leveraging local influencers where US celebrities and NFL players are less known, such as a K-pop idol for Asia as a secondary ambassador)[8]. We plan to launch two new brands in 2027: likely one in Q2 and one in Q4. These could be a wellness supplement line and a personal care device, for example, each with their own influencer partnership (we are already in discussions with

STARLABS

potential partners, e.g., a famous Latin American pop star for a fitness supplement brand, which would open the LATAM market for us). Concurrently, the full public launch of the $STAR token would occur around mid- to late-2027. This involves listing on exchanges (if market conditions allow), initiating the profit-share mechanism to stakers, and ramping up community governance features. By the end of 2027, we expect to have 6+ brands live, a vibrant token community, and to be operating in North America, Europe, and parts of Asia/Pacific and Latin America.

- **2028 & Beyond:** By 2028, we will launch our seventh brand (already conceptualized to target an emerging trend in wellness or beauty tech). At this point, Star Lab transitions from start-up to an established multi-brand company. Our focus would shift to optimization – driving same-store sales growth, improving margins through supply chain efficiencies, and deepening the token ecosystem's integration into the business (perhaps rolling out a unified Star Lab app or marketplace). We will also evaluate if opening our platform to external projects makes strategic sense (which could unlock a whole new growth vector by taking equity in influencer brands launched by others on our platform).

Exit Strategy: We foresee multiple attractive exit or liquidity scenarios for Star Lab's investors: - **Initial Public Offering (IPO):** Our financial trajectory (>$1B revenue, strong margins by 2028) could position us for a public listing on NASDAQ or a similar exchange. An IPO would allow us to raise additional growth capital and give investors liquidity. Given our blend of tech and consumer, we could be an exciting IPO story (the "Web3-powered L'Oréal of the new era"). We'd likely target an IPO in the 2028–2030 window if we maintain projected growth, allowing investors to potentially realize returns at many multiples of the entry valuation. - **Strategic Acquisition (Whole Company):** Large consumer goods conglomerates (Estée Lauder, LVMH, Unilever, P&G, Coty, etc.) are all hungry for proven brands and platforms that tap into younger demographics. A company acquiring Star Lab would instantly gain a portfolio of trendsetting brands plus a tech platform and community. We could envision a scenario where, say, a Coty or

STARLABS

Estée Lauder in 2027+ offers to acquire Star Lab Holdings outright for several billion dollars. They have paid high multiples for single brands (e.g., Estée Lauder bought Too Faced for $1.45B, a color cosmetics brand, to access millennial customers); our multi-brand portfolio could warrant a premium. - **Strategic Acquisitions (Individual Brands):** We could also pursue partial exits by selling one or more individual brands to strategics while continuing to operate the rest. For example, if a particular brand receives a lucrative offer (imagine L'Oréal wanting our Salmon Sperm line to fold into their luxury skincare division), we might divest that brand for a significant sum and return proceeds to shareholders (or reinvest in new projects). Our structure makes this feasible without collapsing the whole company, as each brand is a separate entity under SLH. Such brand-level exits could happen as early as 2026–2027 if performance is strong and offers come in (recall, Kylie Jenner sold 51% of her brand at a $1.2B valuation just a few years after launch[1]). - **Merger or SPAC:** Another path could be merging with a complementary company or using a SPAC to go public more quickly if market conditions favor that route around 2026–2027. For instance, a SPAC focusing on Web3 consumer plays could find Star Lab an ideal target. - **Token Liquidity:** In parallel, the $STAR token provides a unique liquidity angle. By 2027, if the token is live and traded, it creates a market capitalization of its own. Early investors who receive tokens could liquidate a portion on the market to realize some returns independent of an equity exit. Moreover, a high token value could incentivize strategic partners or even the company itself to buy back equity from early investors (as the token could be an accessible currency to raise funds or collateralize loans).

Our goal is to maximize investor returns, so we will remain opportunistic about exit avenues. We believe that building the company to a scale where an IPO is viable gives the highest upside, but we will continually evaluate strategic interest. The presence of multiple strong brands means even a partial sale can return a multiple of the initial investment, thereby de-risking remaining investors. We are targeting an **equity value north of $1–2 billion by 2028**, at which point we would explore these options in earnest.

STARLABS

In conclusion, Star Lab is not just planning for a single exit – we are creating a platform that can generate recurring success and afford flexibility in how investors realize gains. Whether through a blockbuster IPO or strategic sales, we aim to deliver an exceptional return on investment by executing our vision of a celebrity-powered, community-driven brand empire.

Through Star Lab Funds, we are building a world where the celebrity's authentic attachment to a service provides the credibility, while the fan's economic participation provides the sustainability. > "We are moving away from the era of 'The Monologue'—where the star speaks and the fan listens—to 'The Enterprise,' where the star leads and the partners build," says Horblitt.

This is the most powerful force in modern commerce. It creates a "moat" around the business that competitors cannot cross, because you cannot compete with a community that feels—and is—economically empowered.

Appendix: Additional details available on request include our full financial model (with scenario analysis), tokenomic model documentation, sample marketing calendars for each brand launch, and legal structure diagrams. We also have draft partnership agreements and letters of intent that underpin many of the commitments mentioned above. We encourage potential investors to review these materials in diligence – transparency is part of our ethos.
